

### **G20 Summit 2023: World Leaders Pledge to Promote One Health Approach, Improve Accessibility and Prioritise AMR 01 September–31 October, 2023**

The Union Health Ministry is considering a proposal to regulate alcohol content in drug preparations such as aromatic tincture in order to curb their illegal sale at pharmacies. They are most often used as ‘country liquor’ by economically weaker sections.

On an important note, in the G20 summit, the biggest highlight was that the G20 New Delhi Leaders’ Declaration was adopted and the members of the G20 arrived at a “100% consensus” on the opening day of the Summit. On the health front, after facing the burn of the disastrous COVID-19 pandemic, the declaration emphasises future pandemic preparedness and the improvement of essential health services and systems.

In an interesting move, the FSSAI, has taken action against Food Business Operators, which were found to be violating food safety law and it also in view of the upcoming festive season, convened a meeting with Indian Sweets manufacturers on September 25, 2023 to emphasise on the compliance to be followed to ensure safety and quality of edibles and raw materials. The meeting was attended by sweet manufacturers and associations across the country and it has also “strongly urged” consumers and food vendors across the country to stop using newspapers for packing, serving or and storing items. According to the Food Safety and Standards (Packaging) Regulations, 2018, use of newspapers or similar materials for storing and wrapping food is strictly prohibited.

On another note, the Custom authority does not need to send an imported food item for clearance to the FSSAI if it is meant for re-export or production of value-added items, which are only for exports, the authority has clarified. In continuation to some major steps taken, FSSAI has recommended the inclusion of QR code on food products for accessibility by visually impaired individuals stating that this will ensure access to safe food for all including individuals with special needs such as visually impaired individuals

With the Indian drugs failing quality checks in other countries, the government recently made Good Manufacturing Practices mandatory for micro, small and medium enterprises manufacturing drugs.

In this twelfth volume of Occasional News Wrap, various dimensions of health regulation issues have been captured, which appeared by way of op-eds, articles, news etc. during the month of September and October, 2023.
